

Improve productivity and cost reduction in harsh welding environments

E2EW Series boosts productivity while cutting equipment costs in welding processes

Sophisticated and complex production equipment and a severe shortage of skilled workers increase the need to easily design equipment and maintain and improve equipment uptime without relying on experience and skills. Omron's E2EW Series offers stable detection and excellent environmental resistance. This improves the efficiency of design, commissioning, operation, and maintenance of welding lines, contributing to increasing productivity and reducing equipment costs.

Note: DC 2-wire model: green indicator ON (setting distance range), DC 3-wire model: orange indicator ON (operating)

PREMIUM Model	—	●
BASIC Model	●	●

Reduce maintenance and replacement frequency even in harsh environments

E2EW spatter-resistant models are coated with fluororesin to prevent spatter from sticking, reducing maintenance frequency. Another technology to prevent coating abrasion reduces sensor replacement frequency.

Technologies > Page 8

* 1. This value assumes that the sensor operates 10 hours a day in an arc welding environment and is cleaned once a month (12 times a year). If our previous model (E2EF-Q) needs to be replaced once every 3 times it is cleaned, the E2EW-Q Proximity Sensor needs to be replaced once every 180 times it is cleaned. This means that there is no need to replace the E2EW-Q Proximity Sensor for 10 or more years.

PREMIUM Model	—	●
BASIC Model	—	—

Less unexpected downtime due to false detections

Stable long distance detection reduces unexpected line stoppages previously caused by false detections due to vibrating workpieces.

Technologies > Page 9

Stable detection and common design for both iron and aluminum

The E2EW Proximity Sensor offers the same sensing distance for both iron and aluminum, enabling common design. Its exceptional sensing range mitigates false detections, thereby minimizing unexpected downtime.

Technologies > Page 10

Stable operation by identifying changes in equipment condition

In addition to presence detection, invisible temperature changes of equipment can be identified, which helps detect equipment abnormalities.

Technologies > Page 11

* 2. Based on Omron investigation in September 2021. M12 quadruple distance models.

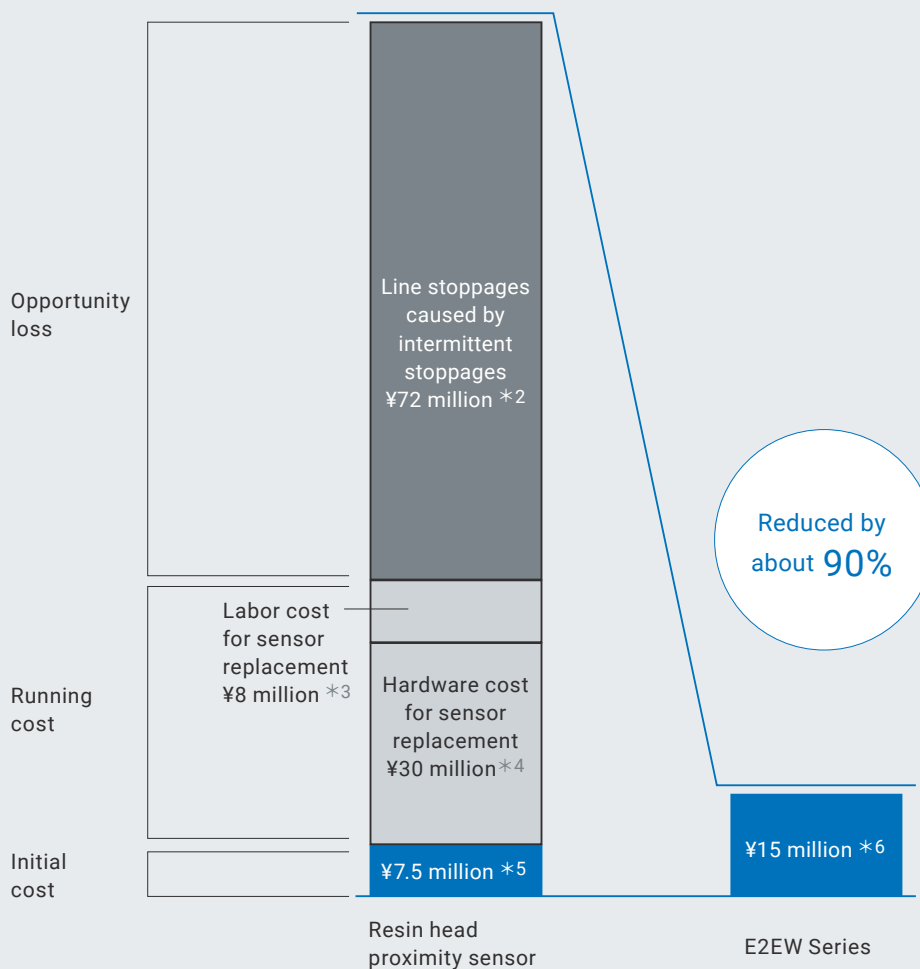

Address the issue of equipment costs

For resin head proximity sensor users

Reduce total equipment costs

The E2EW DC 2-wire BASIC Model can significantly reduce total costs because its robust and environmental resistant design eliminates hardware and labor costs associated with replacing sensors and opportunity loss caused by line stoppages due to sensor failures *7.

Reduction in total costs *7 for 10 years *1

Note: The graphs are for illustration purposes only.

*1. It is defined that an automotive manufacturer makes a model changeover every 10 years. *2. The time required for replacement due to unexpected stoppages is estimated to be 1 hour per month, and opportunity loss per minute is estimated to be ¥10,000. *3. Hourly labor cost for replacement ¥2,000 x 1,000 sensors x replacement 4 times (for 10 years). *4. List price of E2E NEXT (DC 2-wire Standard Model, M12) ¥7,500 x 1,000 sensors x replacement 4 times (for 10 years). *5. List price of E2E NEXT (DC 2-wire Standard Model, M12) ¥7,500 x 1,000 sensors. *6. List price of E2EW (DC 2-wire Spatter-resistant Single distance Model, M12) ¥15,000 x 1,000 sensors. *7. Estimated from 1,000 sensors (20 sensors on a jig x 50 jigs) in a welding line for 250,000 cars. There is no need to replace the E2EW Series for 10 years from the viewpoints of shock resistance (*Y) and spatter resistance (*Z). (*Y) This value assumes that the equipment operates 10 hours a day and workpieces mounted to welding jigs hit a proximity sensor 100 times a day with the force equivalent to the force used in our continuous impact tests. Omron's sensor was not penetrated even after our continuous impact test consisting of 200,000 repetitions, which means that there is no need to replace it for 10 or more years. (*Z) This value assumes that the sensor operates 10 hours a day in an arc welding environment and is cleaned once a month (12 times a year). If our previous model (E2EF-Q) needs to be replaced once every 3 times it is cleaned, the E2EW-Q Proximity Sensor needs to be replaced once every 180 times it is cleaned. This means that there is no need to replace the E2EW-Q Proximity Sensor for 10 or more years.

Long-lasting spatter resistance without need for replacement for 10 years*1

The spatter and abrasion resistant coating ensures long-lasting resistance.

Spatter resistance reduces maintenance frequency

The spatter resistant fluororesin coating reduces maintenance frequency even in environments with welding spatter.

Previous model *2

Spatter covering a wide area causes malfunction in about one month.

E2EW-Q

Fluororesin coating prevents spatter from sticking.

Cleaning frequency reduced to half*3

Abrasion resistance reduces sensor replacement frequency

The abrasion resistant fluororesin coating provides long-lasting spatter resistance against cleaning, allowing for less frequent sensor replacement.

Previous model *2

40x zoom with a microscope

After use*4

Coating comes off quickly even with a spatter-resistant model.

E2EW-Q

40x zoom with a microscope

After use*4

Coating lasts long. 1/60 replacement frequency*5

Technologies for increasing spatter resistance **Patent Pending** *6

Key points for increasing spatter resistance: 1. Prevent spatter from sticking
2. Prevent the coating from being worn away during spatter cleanup
Omron pursued two technologies shown below to deliver long-lasting resistance.

Technology to prevent spatter from sticking

The coating film formation technology to apply a highly hydrophobic coating reduces the amount of spatter sticking to the surface to approximately half of previous models.

Technology to prevent coating from wearing off

The unique coating film formation technology coupled with a specially treated base surface greatly reduces abrasion, to approximately 1/60 of previous models.

*1. This value assumes that the sensor operates 10 hours a day in an arc welding environment and is cleaned once a month (12 times a year). If our previous model (E2EF-Q) needs to be replaced once every 3 times it is cleaned, the E2EW-Q Proximity Sensor needs to be replaced once every 180 times it is cleaned. This means that there is no need to replace the E2EW-Q Proximity Sensor for 10 or more years. *2. Our previous model E2EF-Q. *3. Comparison with our previous model E2EF-Q. Based on Omron investigation in September 2021. *4. The surface is brushed 10 times vertically and horizontally with a metal brush for each cleaning. Cleaning is repeated 6 times. *5. Comparison with our previous model E2EF-Q. Based on Omron investigation in September 2021. *6. "Patent Pending" means that we applied for a patent in Japan, and "Patented" means that we obtained a patent in Japan. (As of September 2021)

PREMIUM Model	—	●
BASIC Model	—	—

Exceptional^{*1} sensing range

Previous full metal body proximity sensors with a shorter sensing distance than resin head proximity sensors cannot detect stably if workpieces are moved from their intended positions. E2EW PREMIUM Models with a longer sensing distance reduce false detections, minimizing unexpected downtime. Furthermore, when equipment is set up or a sensor is replaced, the sensor can be quickly and easily installed without strict adjustment of its installation distance. This maintains and further improves equipment uptime.

Approximately double the sensing distance of previous model^{*1} (quadruple distance model)

Exceptional sensing range ^{*2}

Sensing distance comparison

*1. Comparison with our previous model E2EF. *2. Based on Omron investigation in September 2021.

More efficient sensor installation design

E2EW Proximity Sensors with the exceptional sensing range provide accurate detection from a certain distance, which is impossible with previous models. They can be installed with sufficient space to reduce sensor damage.

Design example

(Size: M12)

When prioritizing sensing distance

Use a quadruple distance model with an exceptional sensing range (sensing distance: 7 mm). The sensing surface of the proximity sensor must stick out from the plate.

When installing flush with the surface

Use a triple distance model (sensing distance: 6 mm). When the proximity sensor is embedded in iron metal, its sensing surface does not need to protrude from the surface.

Note: Refer to page 35 for detail.

	DC 2-wire	DC 3-wire
PREMIUM Model	—	●
BASIC Model	—	—

Equal sensing distances for iron and aluminum

A unique Omron technology provides equal sensing distances for both iron and aluminum. Mixed-metal production lines with less unexpected downtime can be designed.

Minimizing unexpected downtime maximizes uptime

E2EW Proximity Sensors provide equally long distance detection for iron and aluminum, reducing false detections even if workpieces are moved from their intended positions. Furthermore, when equipment is set up or a sensor is replaced, the sensor can be quickly and easily installed without strict adjustment of its installation distance.

Checking correct positions of doors

Previous model

A workpiece that is out of position would cause false detections, leading to equipment stoppages.

False detection

E2EW

Long-distance detection means improved detection margins, enabling stable detection even when a workpiece is out of position.

Stable detection

*1. Triple distance models that can be installed flush with the surface are also available. Refer to page 9 for details.

Unified design reduces design work

Unlike previous sensors which need to be changed for different sensing distances, E2EW Proximity Sensors with the same sensing distance for both iron and aluminum eliminate the need to change sensors in order to detect positions in mixed production lines containing both metal components. This enables standardization of production equipment and mechanical drawings.

Previous model

Different designs are required for different size sensors.

E2EW

Design can be standardized on a single sensor.

*2. Quadruple distance models.

A unique Omron technology provides equally long sensing distances for both iron and aluminum

The problem of previous full metal body proximity sensors was the short sensing distance. E2EW Proximity Sensors are equipped with a unique technology for suppressing noise influence as well as the PRD*3 technology. Together they reduce the influence of noise, extending the sensing distance. Furthermore, equally long distance detection for iron and aluminum is possible by adjusting the timing and time to detect current changes of sensing objects.

Technology for suppressing noise influence **Patent Pending** *4

Random timing of pulsed current reduces the periodic noise effect on the detection signals.

Long sensing distances for both iron and aluminum

*3. PRD (Pulse Response Detection) is a technology to detect current changes of sensing objects when pulsed currents are applied to coils.

*4. "Patent Pending" means that we applied for a patent in Japan, and "Patented" means that we obtained a patent in Japan.

Detection level and temperature visualization with IO-Link

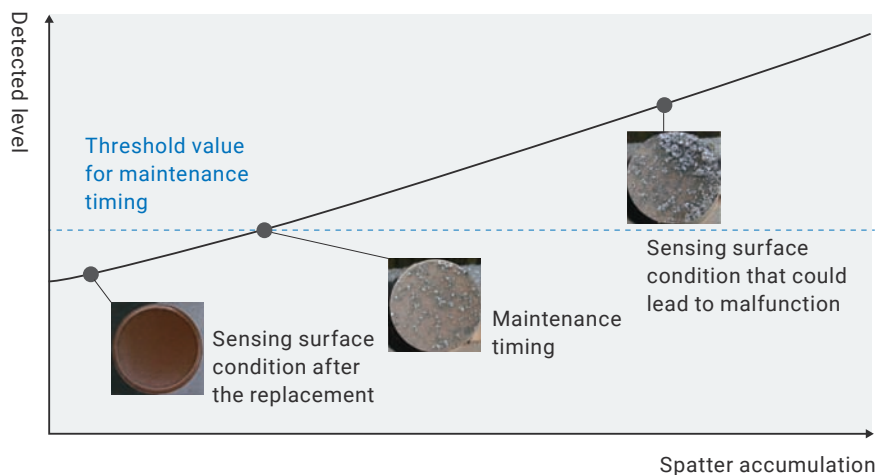

Daily changes in equipment conditions can be monitored via IO-Link, which helps you reduce tuning time during the commissioning phase and stabilize equipment operation during the mass production phase.

Identify changes in equipment by visualizing detection level

A real-time view of how the proximity sensors are detecting objects provides understanding of everyday changes in equipment conditions that may not be visible to the naked eye.

Application example Maintenance management based on spatter accumulation

Weld spatter can cause proximity sensors to malfunction. Monitoring detection level changes can allow for timely maintenance.

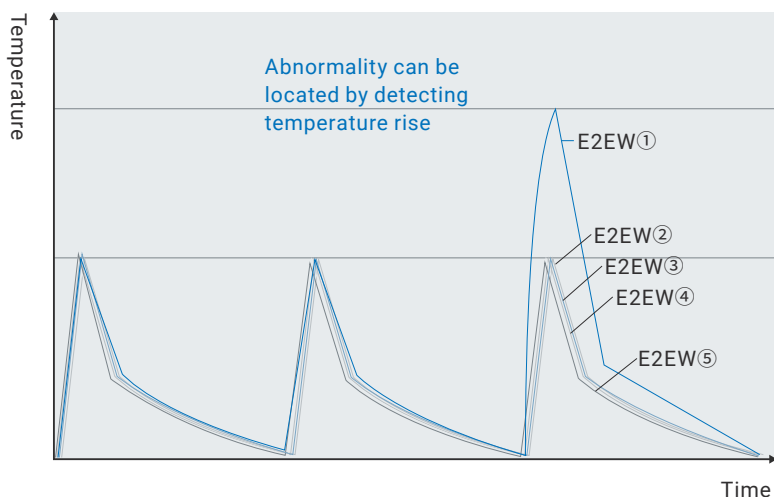

Detect equipment abnormalities by visualizing temperature

Temperature changes in tough environments are visualized in real time, helping detection of equipment abnormalities.

Application example Identification of temperature changes during welding

Temperature changes can be monitored via the proximity sensors installed in multiple positions to locate abnormal locations.

Proximity sensor temperature changes during welding cycles

Welding Proximity Sensor E2EW Series

DC 2-wire/DC 3-wire

Stable detection in lines containing both aluminum and iron

- Equivalent sensing distances for both iron and aluminum *1
- Enables common design for lines with both iron and aluminum *1
- The exceptional sensing range *2, which means fewer false detections and thereby fewer unexpected stoppages.
- OMRON's unique fluororesin coating technologies enable long-lasting spatter resistance *4, eliminates the need to replace for 10 years *3.
- Durable full metal body to reduce unexpected stoppages
- 2-output (NO+NC) models and models with IO-Link *1 are also available.
- Laser printed information (sensing distance on the sensor head, model on the cable, and model on the metal part of the connector model) can be reducing errors during sensor replacement. *5
- Equipped with a function, which effectively cancels pulse noise of current magnetic field. *1
- UL certification (UL60947-5-2) and CSA certification (CSA C22.2 UL60947-5-2-14)

*1. PREMIUM Models only.

*2. Based on September 2021 OMRON investigation.

*3. This value assumes that the sensor operates 10 hours a day in an arc welding environment and is cleaned once a month (12 times a year). If our previous model (E2EF-Q) needs to be replaced once every 3 times it is cleaned, the E2EW-Q Proximity Sensor needs to be replaced once every 180 times it is cleaned. This means that there is no need to replace the E2EW-Q Proximity Sensor for 10 or more years.

*4. Models with spatter-resistant coating only.

*5. Models without spatter-resistant coating only.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

PNP output (PREMIUM Model)

*3. The timer function of the control output can be set up by the IO-Link communications. (It is able to select ON delay, OFF delay, one-shot, or ONOFF delay function and select a timer time of 1 to 16,383ms (T).)

*4. The excessive proximity diagnosis function can be selected by the IO-Link communications.

*5. The instability detection diagnosis can be selected by the IO-Link communications.

*6. The judgment time for the instability detection diagnosis can be selected by the IO-Link communications. (For the ON delay timer function, the setting can be selected from 0 (invalid), 10, 50, 100, 300, 500, or 1000 ms.)

*7. The judgment distance of the excessive proximity diagnosis function can be selected by the IO-Link communications. (The distance can be selected as a combination of the material of the object detected, such as iron, aluminum, or SUS and the judgment distance of approximately 10, 20, or 30%. However, it is not allowed to select a combination of aluminum and 10%.)

Please contact your OMRON sales representative regarding the IO-Link setup file (IODD file).

Please contact your OMRON sales representative regarding assignment of data.

*1. For models with IO-Link, the operation mode can be changed by the IO-Link communications.

*2. If using a model with IO-Link as a general sensor or using a model without IO-Link, it operates in the standard I/O mode (SIO mode).

Safety Precautions

Be sure to read the precautions for all models in the website at: <http://www.ia.omron.com/>.

Warning Indications

⚠ WARNING	Warning level Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

	General prohibition Indicates the instructions of unspecified prohibited action.
	Caution, explosion Indicates the possibility of explosion under specific conditions.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Otherwise, explosion may result. Never use the product with an AC power supply.

Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

- Do not use the product in environments subject to flammable or explosive gases.
- Do not attempt to disassemble, repair, or modify the product.
- Do not use a voltage that exceeds the rated operating voltage range.
Applying a voltage that is higher than the operating voltage range may result in explosion or fire.
- Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or fire.
- If the power supply is connected directly without a load, the internal elements may explode or burn.
- Dispose of the product according to applicable regulations (laws).

Precautions for Correct Use

Do not use the product in any atmosphere or environment that exceeds the ratings.

Operating Environment

- Do not install the Sensor in the following locations.
 - Outdoor locations directly subject to sunlight, rain, snow, water droplets, or oil.
 - Locations subject to atmospheres with chemical vapors, in particular solvents and acids.
 - Locations subject to corrosive gases.
- The Sensor may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field. Please refer to the Precautions for Correct Use on the OMRON website (www.ia.omron.com) for typical measures.
- Laying the Proximity Sensor wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the Sensor using a separate conduit or independent conduit.
- Never use thinner or other solvents. Otherwise, the Sensor surface may be dissolved.
- When turning on the power by influence of temperature environment, an output mis-pulse sometimes occurs. After the sensor has passed for 300 msec after turning on, please use in the stable state.
- The sensor is adjusted with a high degree of accuracy, so do not use in the environment with sudden temperature change.
- Operation check is performed using an OMRON's IO-Link master. If using an IO-Link master from another company, perform the operation check in advance. (Models with IO-Link only.)
- When connecting non IO-Link compliant models to the IO-Link master, use the SIO mode.
- In the IO-Link mode, the cord between the IO-Link master and sensor must have a length of 20 m or less. (Models with IO-Link only.)
- The Sensor cannot be used embedded in where pressure is constantly applied to the sensing surface, such as hydraulic cylinders and hydraulic valves.

AND Connection of Proximity Sensors (DC 2-wire)

Two or more sensors cannot be connected in series on the AND circuit. Use them via a relay as shown on the figure.

OR Wiring of Proximity Sensors (DC 2-wire)

As a general principle, two or more sensors cannot be used in parallel on the OR circuit. It is possible only when sensors do not operate simultaneously and loads do not need to be maintained. When loads need to be maintained, use the sensors via a relay as shown on the figure.

Design

Influence of Surrounding Metal

When mounting the Proximity Sensor, ensure that the minimum distances given in the following table are maintained. If you use a nut, only use the provided nut. And ensure that the minimum distances between the sensing surface and nut is bigger than the "L" given in the following table. Other non-ferrous metals affect sensor's performance in the same way as aluminum. Perform the operation check in advance.

(Unit: mm)

Mounting panel material: Iron

Single distance model	E2EW-(Q)X2□12	40	35
	E2EW-(Q)X5□18	65	60
	E2EW-(Q)X10□30	110	100

Chips from Cutting Aluminum

Normally, chips from cutting aluminum will not cause a detection signal to be output even if it adheres to or accumulates on the detection surface. In the following cases, however, a detection signal may be output.

Remove the cutting chips in these cases.

1. If $d \geq 2/3D$ at the center of the detection surface where d is the cutting chip size and D is the detection surface size

(Unit: mm)

Model	Dimension	D
E2EW-(Q)X□12		10
E2EW-(Q)X□18		16
E2EW-(Q)X□30		28

2. If the cutting chips are pressed down

Mounting

Tightening Force

Do not tighten the nut with excessive force.

A washer must be used with the nut.

The tightening force must be the same or less than the figures in the following table.

Quadruple distance model, Triple distance model (Unit: N·m)

Size	Torque
M12	20 (15)
M18	70 (35)
M30	180 (60)

* Tighten the nut of the E2EW-Q to a torque in parentheses.

Double distance model, Single distance model (Unit: N·m)

Size	Torque
M12	30 (15)
M18	70 (35)
M30	180 (60)

* Tighten the nut of the E2EW-Q to a torque in parentheses.

Note: When mounting the Proximity Sensor, only use the provided nut. Do not use set screws. The Sensor may malfunction.

E2EF/E2FM

DC 2-wire/DC 3-wire

Metal Head that Withstands Harsh Environments Where the Workpiece Can Rub against the Sensor

- Completely stainless-steel housing
- Spatter-resistant Models with fluororesin coating are available.
- Aluminum chip immunity
- Pre-wired Smartclick Connector Models are also available.

 Be sure to read *Safety Precautions* on page 43.

Note: Models with a fluororesin coating also use vinyl chloride for the cable material and require separate protection.

Ordering Information

E2EF Series

Safety Precautions

Be sure to read the precautions for all models in the website at: <http://www.ia.omron.com/>.

Warning Indications

 WARNING	Warning level Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

	General prohibition Indicates the instructions of unspecified prohibited action.
	Caution, explosion Indicates the possibility of explosion under specific conditions.

WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Otherwise, explosion may result. Never use the product with an AC power supply.

Precautions for Safe Use

- The following precautions must be observed to ensure safe operation.
- Do not use the Sensor in an environment where inflammable or explosive gas is present.
 - Do not attempt to disassemble, repair, or modify any Sensors.
 - Power Supply Voltage
Do not use a voltage that exceeds the rated operating voltage range. Applying a voltage that is higher than the operating voltage range may result in explosion or fire.
 - Incorrect Wiring
Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or fire.
 - Connection without a Load
If the power supply is connected directly without a load, the internal elements may explode or burn. Be sure to insert a load when connecting the power supply.

Precautions for Correct Use

- Do not use the Sensor under ambient conditions that exceed the ratings.
- Do not use the Sensor in the following locations.
 - Outdoor locations directly subject to sunlight, rain, snow, or water droplets
 - Locations subject to atmospheres with chemical vapors, in particular solvents and acids
 - Locations subject to corrosive gas
 - The Sensor may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field. Refer to the OMRON website (www.ia.omron.com/) for typical measures.
 - Laying the Sensor wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the Sensor using a separate conduit or independent conduit.
 - Cleaning
Never use thinner or other solvents. Otherwise, the Sensor surface may be dissolved.
 - The Sensor cannot be used embedded in where pressure is constantly applied to the sensing surface, such as hydraulic cylinders and hydraulic valves.

Design

Influence of Surrounding Metal

When the Proximity Sensor is embedded in metal, make sure that the clearances given in the following table are maintained. The values depend on the type of nuts used for mounting. Be sure to use the supplied nuts (SUS303).

(Unit: mm)

Model	Item Embedding material	l	d	D	m	n
		E2EF-(Q)X2D1	Iron	0	8	0
	Aluminum	10	50	10	8	50
E2FM-X1R5□	Iron	0	8	0	4.5	30
	Aluminum	10	50	10	4.5	50

Note: The influence from other non-magnetic surrounding metals is nearly the same as that from aluminum.

Mutual Interference

When installing two or more Sensors face-to-face or side-by-side, ensure that the minimum distances given in the following table are maintained.

(Unit: mm)

Model	Item	A	B
E2EF-(Q)X2D1		35	35
E2FM-X1R5□		35	30

Enables easier and standardized designs previously not possible with fluororesin coating models

- Nearly double*¹ the sensing distance of previous
- With high-brightness LED, the indicator is visible anywhere from 360°
- Comes in a wide variation to make sensor selection easy
- UL certification (UL60947-5-2)*² and CSA certification (CSA C22.2 UL60947-5-2-14)

*1. Comparison with E2EQ products. Based on September 2021 OMRON investigation.

*2. M8 (4-pin) Connector Models are not UL certified.

 Be sure to read *Safety Precautions* on page 60.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

*1. Models with 5-m cable length are also available (Example: E2EQ-X6B1D12 5M)

*2. M12 Connector Models are also available with "M1" suffix. (Example: E2EQ-X2B1D8-M1)

*3. NC models are also available. The model number is E2EQ-X□□□2□ (Example: E2EQ-X3B28 2M).

Note: 1. Models in are equipped with IO-Link (COM2). For IO-Link (COM3), select a model number with the format of "E2E-X□□□□□" (Example: E2EQ-X6B1T12 2M).

Operation mode NO can be changed to NC via IO-Link communications.

2. IO-Link is not supported for NC-type PNP outputs or all types of NPN outputs.

E2EQ NEXT Series

PREMIUM Model

E2EQ NEXT Series (Spatter-resistant Triple distance model)

DC 2-wire Shielded *1 [Refer to Ratings and Specification on page 51, Dimension on page 63.]

*2. Models with 5-m cable length are also available (Example: E2EQ-X6B1D12 5M)

*3. M12 Connector Models are also available with "M1" suffix. (Example: E2EQ-X3B1D8-M1).

*4. NC models are also available. The model number is E2EQ-□□□□ (Example: E2EQ-X3B28 2M).

Note: 1. Models in are equipped with IO-Link (COM2). For IO-Link (COM3), select a model number with the format of "E2E-X□□□□T□" (Example: E2EQ-X6B1T12 2M).

Operation mode NO can be changed to NC via IO-Link communications.

2. IO-Link is not supported for NC-type PNP outputs or all types of NPN outputs.

Sensor I/O Connectors (Sold Separately)

For details of the connector, refer to XS5 Series on page 70.

Ratings and Specifications

BASIC Model

E2EQ NEXT Series (Spatter-resistant Double distance model)
DC 2-wire Shielded

Item	Size Model	M12	M18	M30
		E2EQ-X4D□12	E2EQ-X8D□18	E2EQ-X15D□30
Sensing distance		4 mm ±10%	8 mm ±10%	15 mm ±10%
Setting distance *1		0 to 3.2 mm	0 to 6.4 mm	0 to 12 mm
Differential travel		15% max. of sensing distance		
Detectable object		Ferrous metals (For non-ferrous metals, refer to <i>Engineering Data</i> on page 53.)		
Standard sensing object (Iron)		12 × 12 × 1 mm	18 × 18 × 1 mm	30 × 30 × 1 mm
Response frequency *2		1,000 Hz	500 Hz	250 Hz
Power supply voltage		10 to 30 VDC (including 10% ripple (p-p)), Class 2		
Current consumption		0.8 mA max.		
Control output	Load current	3 to 100 mA		
	Residual voltage	5 V max. (Load current: 100 mA, Cable length: 2 m)		
Indicator		Operation indicator (orange), Setting indicator (green)		
Operation mode		NO Refer to the timing charts under <i>I/O Circuit Diagrams/Timing charts</i> on page 56 for details.		
Protection circuits		Surge suppressor, Load short-circuit protection		
Ambient temperature range		Operating: -25 to 70°C, Storage: -40 to 85°C (with no icing or condensation)		
Ambient humidity range		Operating and Storage: 35% to 95% (with no condensation)		
Temperature influence		±10% max. of sensing distance at 23°C in the temperature range of -25 to 70°C		
Voltage influence		±1% max. of sensing distance at rated voltage in the rated voltage ±15% range		
Insulation resistance		50 MΩ min. (at 500 VDC) between current-carrying parts and case		
Dielectric strength		1,000 VAC, 50/60 Hz for 1 minute between current-carrying parts and case		
Vibration resistance (destruction)		10 to 55 Hz, 1.5-mm double amplitude for 2 hours each in X, Y, and Z directions		
Shock resistance (destruction)		1,000 m/s ² 10 times each in X, Y, and Z directions		
Degree of protection		Pre-wired Models, Pre-wired Connector Models: IEC 60529:IP67, JIS C 0920 Annex 1: IP67G		
Connection method		Pre-wired Models (Standard cable length: 2 m) and M12 Pre-wired Smartclick Connector Models (Standard cable length: 0.3 m)		
Weight (packed state)	Pre-wired	Approx. 100 g	Approx. 180 g	Approx. 250 g
	M12 Pre-wired Smartclick Connector	Approx. 75 g	Approx. 110 g	Approx. 180 g
Materials	Materials	Fluororesin coating (Base material: brass)		
	Sensing surface	Fluororesin		
	Clamping nuts	Fluororesin coating (Base material: brass)		
	Toothed washer	Zinc-plated iron		
	Cable	Vinyl chloride (PVC)		
Accessories		Instruction manual, Clamping nuts, Toothed washer		

*1. Use the Sensor within the range in which the setting indicator (green LED) is ON.

*2. The response frequency is an average value. Measurement conditions are as follows: standard sensing object, a distance of twice the standard sensing object, and a set distance of half the sensing distance.

Weight *3 (packed state)	Pre-wired	Approx. 85 g	Approx. 95 g	Approx. 170 g	Approx. 240 g	Approx. 85 g	Approx. 95 g	Approx. 170 g	Approx. 240 g
	M12 Pre-wired Smartclick Connector	Approx. 55 g	Approx. 70 g	Approx. 105 g	Approx. 170 g	Approx. 55 g	Approx. 70 g	Approx. 105 g	Approx. 170 g
	Connector	Approx. 40 g	Approx. 55 g	Approx. 85 g	Approx. 160 g	Approx. 40 g	Approx. 55 g	Approx. 85 g	Approx. 160 g
Materials	Case	M8 size: Fluororesin coating (Base material: SUS303)/M12, M18, M30 size: Fluororesin coating (Base material: brass)							
	Sensing surface	Fluorine resin							
	Clamping nuts	Fluororesin coating (Base material: brass)							
	Toothed washers	Zinc-plated iron							
	Cable	Vinyl chloride (PVC)							
Main IO-Link functions *2		Operation mode switching between NO and NC, self diagnosis enabling, excessive proximity judgment distance selecting, timer function of the control output and timer time selecting, instability output (IO-Link mode) ON delay timer time selecting function, monitor output, operating hours read-out, readout of the sensor internal temperature, and initial reset							
IO-Link Communication specifications *2	IO-Link specification	Ver1.1							
	Baud rate	COM2 (38.4 kbps), COM3 (230.4 kbps)							
	Data length	PD size: 2 bytes, OD size: 1 byte (M-sequence type: TYPE_2_2)							
	Minimum cycle time	COM2: 2.3 ms, COM3: 0.4 ms							
Accessories		Instruction manual, Clamping nuts, Toothed washer							

*1. The response frequency is an average value. Measurement conditions are as follows: standard sensing object, a distance of twice the standard sensing object, and a set distance of half the sensing distance.

*2. IO-Link is not supported for NC-type PNP outputs or all types of NPN outputs.

*3. Weight of the standard body-sized model.

*4. The IP67G is the degree of protection which is defined according to the JIS (Japanese Industrial Standards).

The IP67 indicates the same level of protection as defined by the IEC, and the G indicates that a device has resistance to oil.

Current consumption		1-output models: 16 mA max., 2-output models: 20 mA max.			
Output configuration		B□ Models: PNP open collector, C□ Models: NPN open collector			
Operation mode (with sensing object approaching)		1-output models (B1, C1): NO (Normally open), 1-output models (B2, C2): NC (Normally closed)		1-output models (B1, C1): NO (Normally open), 1-output models (B2, C2): NC (Normally closed), 2-output models (B3, C3): NO+NC (Normally open, Normally closed)	
Control output	Load current	1-output models: 10 to 30 VDC, Class 2, 100 mA max.		1-output models: 10 to 30 VDC, Class 2, 100 mA max., 2-output models: 10 to 30 VDC, Class 2, 50 mA max.	
	Residual voltage	1-output models: 2 V max. (Load current: 100 mA, Cable length: 2 m)		1-output models: 2 V max. (Load current: 100 mA, Cable length: 2 m), 2-output models: 2 V max. (Load current: 50 mA, Cable length: 2 m)	
Indicator *2		In the Standard I/O mode (SIO mode): Operation indicator (orange, lit) and communication indicator (green, not lit) In the IO-Link communication mode (COM mode): Operation indicator (orange, lit) and communication indicator (green, blinking at 1 s intervals)			
Protection circuits		Power supply reverse polarity protection, Surge suppressor, Output short-circuit protection, Output reverse polarity protection			
Ambient temperature range		Operating/Storage: -25 to 70°C (with no icing or condensation)			
Ambient humidity range		Operating/Storage: 35% to 95% (with no condensation)			
Temperature influence		±10% max. of sensing distance at 23°C in the temperature range of -25 to 70°C			
Voltage influence		±1% max. of sensing distance at rated voltage in the rated voltage ±15% range			
Insulation resistance		50 MΩ min. (at 500 VDC) between current-carrying parts and case			
Dielectric strength		1,000 VAC, 50/60 Hz for 1 minute between current-carrying parts and case			
Vibration resistance (destruction)		10 to 55 Hz, 1.5-mm double amplitude for 2 hours each in X, Y, and Z directions			
Shock resistance (destruction)		500 m/s ² 10 times each in X, Y, and Z directions	1,000 m/s ² 10 times each in X, Y, and Z directions		
Degree of protection		Pre-wired Models, Pre-wired Connector Models: IEC 60529: IP67, JIS C 0920 Annex 1: IP67G *4 Connector Models: IEC 60529: IP67			
Connection method		Pre-wired Models (Standard cable length: 2 m) and Pre-wired Connector Models (Standard cable length: 0.3 m), M12 Connector Models			
Weight *3 (packed state)	Pre-wired Models	Approx. 85 g	Approx. 95 g	Approx. 180 g	Approx. 260 g
	M12 Pre-wired Smartclick Connector	Approx. 55 g	Approx. 70 g	Approx. 115 g	Approx. 200 g
	Connector	Approx. 40 g	Approx. 55 g	Approx. 95 g	Approx. 180 g
Materials	Case	Fluororesin coating (Base material: brass)			
	Sensing surface	Fluorine resin			
	Clamping nuts	Fluororesin coating (Base material: brass)			
	Toothed washers	Zinc-plated iron			
	Cable	Vinyl chloride (PVC)			
Main IO-Link functions *2		Operation mode switching between NO and NC, self diagnosis enabling, excessive proximity judgment distance selecting, timer function of the control output and timer time selecting, instability output (IO-Link mode) ON delay timer time selecting function, monitor output, operating hours read-out, readout of the sensor internal temperature, and initial reset			
IO-Link Communication specifications *2	IO-Link specification	Ver 1.1			
	Baud rate	COM2 (38.4 kbps), COM3 (230.4 kbps)			
	Data length	PD size: 2 bytes, OD size: 1 byte (M-sequence type: TYPE_2_2)			
	Minimum cycle time	COM2: 2.3 ms, COM3: 0.4 ms			
Accessories		Instruction manual, Clamping nuts, Toothed washer			

*1. The response frequency is an average value. Measurement conditions are as follows: standard sensing object, a distance of twice the standard sensing object, and a set distance of half the sensing distance.

*2. IO-Link is not supported for NC-type PNP outputs or all types of NPN outputs.

*3. Weight of the standard body-sized model.

*4. The IP67G is the degree of protection which is defined according to the JIS (Japanese Industrial Standards).

The IP67 indicates the same level of protection as defined by the IEC, and the G indicates that a device has resistance to oil.

NO+NC	E2EQ-□B3		

* In the IO-Link mode, the cord between the IO-Link master and sensor must have a length of 20 m or less.

Connector Pin Arrangement

M12 Connector M12 Smartclick Connector	M8 (4-pin) Connector	M8 (3-pin) Connector

DC 3-wire PNP output

*3. The timer function of the control output can be set up by the IO-Link communications. (It is able to select ON delay, OFF delay, or one-shot function and select a timer time of 1 to 16,383ms (T).)

One shot

- *4. The excessive proximity diagnosis function can be selected by the IO-Link communications.
 - *5. The instability detection diagnosis can be selected by the IO-Link communications.
 - *6. The judgment time for the instability detection diagnosis can be selected by the IO-Link communications. (For the ON delay timer function, the setting can be selected from 0 (invalid), 10, 50, 100, 300, 500, or 1000 ms.)
 - *7. The judgment distance of the excessive proximity diagnosis function can be selected by the IO-Link communications. (The distance can be selected as a combination of the material of the object detected, such as iron, aluminum, or SUS and the judgment distance of approximately 10, 20, or 30%. However, it is not allowed to select a combination of aluminum and 30%.)
- Please contact your OMRON sales representative regarding the IO-Link setup file (IODD file).

Please contact your OMRON sales representative regarding assignment of data.

*1. For models with IO-Link, the operation mode can be changed by the IO-Link communications.

*2. If using a model with IO-Link as a general sensor or using a model without IO-Link, it operates in the standard I/O mode (SIO mode).

Be sure to read the precautions for all models in the website at: <http://www.ia.omron.com/>.

Warning Indications

⚠ WARNING	Warning level Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

	General prohibition Indicates the instructions of unspecified prohibited action.
	Caution, explosion Indicates the possibility of explosion under specific conditions.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Otherwise, explosion may result. Never use the product with an AC power supply.

Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

1. Do not use the product in environments subject to flammable or explosive gases.
2. Do not attempt to disassemble, repair, or modify the product.
3. Do not use a voltage that exceeds the rated operating voltage range.
Applying a voltage that is higher than the operating voltage range may result in explosion or fire.
4. Be sure that the power supply polarity and other wiring is correct. Incorrect wiring may cause explosion or fire.
5. If the power supply is connected directly without a load, the internal elements may explode or burn.
6. Be sure to insert a load when connecting the power supply.

Precautions for Correct Use

Do not use the product in any atmosphere or environment that exceeds the ratings.

Operating Environment

1. Do not install the Sensor in the following locations.
 - (1) Outdoor locations directly subject to sunlight, rain, snow, water droplets, or oil.
 - (2) Locations subject to atmospheres with chemical vapors, in particular solvents and acids.
 - (3) Locations subject to corrosive gases.
2. The Sensor may malfunction if used near ultrasonic cleaning equipment, high-frequency equipment, transceivers, cellular phones, inverters, or other devices that generate a high-frequency electric field. Please refer to the Precautions for Correct Use on the OMRON website (www.ia.omron.com) for typical measures.
3. Laying the Proximity Sensor wiring in the same conduit or duct as high-voltage wires or power lines may result in incorrect operation and damage due to induction. Wire the Sensor using a separate conduit or independent conduit.
4. Never use thinner or other solvents. Otherwise, the Sensor surface may be dissolved.
5. The following conditions shall be observed if you use the product under an environment using cutting oil that may affect product's life and/or performance.
 - Usage under the cutting oil condition designated by the specification
 - Usage under the cutting oil dilution ratio recommended by its manufacturer
 - Usage in oil or water is prohibited
 Impact on the product life may differ depending on the oil you use. Before using the cutting oil, make sure that it should not cause deterioration or degradation of sealing components.
6. When turning on the power by influence of temperature environment, an output mis-pulse sometimes occurs. After the sensor has passed for 300 msec after turning on, please use in the stable state. (DC 3-wire only.)
7. The sensor is adjusted with a high degree of accuracy, so do not use in the environment with sudden temperature change. (DC 3-wire only.)
8. Operation check is performed using an OMRON's IO-Link master. If using an IO-Link master from another company, perform the operation check in advance. (Models with IO-Link only.)
9. In the IO-Link mode, the cord between the IO-Link master and sensor must have a length of 20 m or less. (Models with IO-Link only.)

AND Connection of Proximity Sensors (DC 2-wire)

Two or more sensors cannot be connected in series on the AND circuit. Use them via a relay as shown on the figure.

OR Wiring of Proximity Sensors (DC 2-wire)

As a general principle, two or more sensors cannot be used in parallel on the OR circuit. It is possible only when sensors do not operate simultaneously and loads do not need to be maintained. When loads need to be maintained, use the sensors via a relay as shown on the figure.

Design

Influence of Surrounding Metal

When mounting the Proximity Sensor using a nut, only use the provided nut. And ensure that the minimum distances given in the following table are maintained.

When mounting the Proximity Sensor using a nut, only use the provided nut. Nuts that are supplied along with each Sensor are different. Refer to Dimensions for details on shapes.

(Unit: mm)

Type	Model	L	d	D	m	n
DC 2-wire Spatter-resistant Triple distance model	E2EQ-X3D□8	0	20	2	9	18

	E2EQ-X8□18	60	35
	E2EQ-X15□30	110	90
DC 3-wire Spatter-resistant Single distance model	E2EQ-X1R5□8	20	15
	E2EQ-X2□12	30	20
	E2EQ-X5□18	50	35
	E2EQ-X10□30	100	70

Mounting

Tightening Force

Do not tighten the nut with excessive force. A washer must be used with the nut.

- Note: 1.** The allowable tightening strength depends on the distance from the edge of the head, as shown in the following table. (A is the distance from the edge of the head. B includes the nut on the head side. If the edge of the nut is in part A, the tightening torque for part A applies instead.)
- 2.** The following strengths assume washers are being used.

DC 2-wire/DC 3-wire Spatter-resistant Triple distance model

Size	Part A		Part B
	Dimension (mm)	Torque	Torque
M8	9	4 N·m	10 N·m
M12	16	8 N·m	15 N·m
M18	16	15 N·m	30 N·m
M30	23	40 N·m	80 N·m

DC 2-wire/DC 3-wire Spatter-resistant Double distance model, Spatter-resistant Single distance model

Size	Part A		Part B
	Dimension (mm)	Torque	Torque
M8	9	9 N·m	12 N·m
M12	---	---	30 N·m
M18	---	---	70 N·m
M30	---	---	100 N·m

Accessories		Instruction manual		

*1. Use the Sensor within the range in which the green indicator is ON.

*2. The response frequency is an average value.

*3. The residual voltage is 5 V. Make sure that the device connected to the Sensor can withstand the residual voltage.

*4. The response frequency is an average value. Measurement conditions are as follows: standard sensing object, a distance of twice the standard sensing object, and a set distance of half the sensing distance.

Safety Precautions

Refer to *Warranty and Limitations of Liability*.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Precautions for Correct Use

Do not use this product under ambient conditions that exceed the ratings.

Design

Influence of Surrounding Metal

When mounting the Sensor within a metal panel, ensure that the clearances given in the following table are maintained. Failure to maintain these distances may cause deterioration in the performance of the Sensor.

Influence of Surrounding Metal (Unit: mm)

Model	Item	l	d	D	m	n
E2EQ-X4X1(-M1(T)J)		2.4	18	2.4	12	18
E2EQ-X8X1(-M1(T)J)		3.6	27	3.6	24	27
E2EQ-X15X1(-M1(T)J)		6	45	6	45	45
E2EQ-X3D1(-M1(T)GJ)			12		8	18
E2EQ-X7D1(-M1(T)GJ)		0	18	0	20	27
E2EQ-X10D1(-M1(T)GJ)			30		40	45

Mutual Interference

When installing two or more Sensors face-to-face or side-by-side, ensure that the minimum distances given in the following table are maintained.

Mutual Interference (Unit: mm)

Model	Item	A	B
E2EQ-X4X1(-M1(T)J)		30	20
E2EQ-X8X1(-M1(T)J)		60	35
E2EQ-X15X1(-M1(T)J)		110	90
E2EQ-X3D1(-M1(T)GJ)		30	20
E2EQ-X7D1(-M1(T)GJ)		50	35
E2EQ-X10D1(-M1(T)GJ)		100	70

Mounting

Do not tighten the nut with excessive force. A washer must be used with the nut.

Note: 1. The allowable tightening strength depends on the distance from the edge of the head, as shown in the following table. (A is the distance from the edge of the head. B includes the nut on the head side. If the edge of the nut is in part A, the tightening torque for part A applies instead.)
2. The following torque assume washers are being used.

Model	Torque	Part	
		Part A	Part B
		Dimension (mm)	Torque
E2EQ-X4X1(-M1(T)J)	---	---	30 N·m
E2EQ-X8X1(-M1(T)J)			70 N·m
E2EQ-X15X1(-M1(T)J)			180 N·m
E2EQ-X3D1(-M1(T)GJ)	24	15 N·m	---
E2EQ-X7D1(-M1(T)GJ)	29		
E2EQ-X10D1(-M1(T)GJ)	26

Round Water-resistant Connectors (M12 Smartclick)

XS5

Round Water-resistive Smartclick Connectors that Reduce Installation Work

- A newly developed lock mechanism that is compatible with round M12 connectors.
- Simply insert the Connectors, then turn them approximately 1/8 of a turn to lock.
- A positive click indicates locking.
- Spatter-resistant Cables are also available.
- IP67 degree of protection.
- UL approved products.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Note: For details, refer to XS5 on your OMRON website.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Related Products

Proximity Sensors E2E NEXT Series

- Exceptional sensing range*1. Approximately double the sensing distance of previous models
- High-brightness LED indicator visible from 360°
- Only 10 seconds*2 to replace a proximity sensor with the e-jig (mounting sleeve)
- Sensor cable with enhanced oil resistance to withstand oil for 2 years*3

*1. Based on Omron investigation in August 2022.

*2. Time required to adjust the distance when a sensor is installed. Based on Omron investigation.

*3. Refer to *Ratings and Specifications* in the catalog for details.

Refer to the catalog for details.

Cat. No. D120

Oil-resistant Proximity Sensors E2ER/E2ERZ

- Reduces failures caused by ingress of cutting oil and resists oil for 4 years*1
- Four years*1 of stable operation verified in oil resistance testing with representative cutting oils
- Fluoresin blocks ingress from cables
- State-of-the-art sealing methods block ingress through cable joints

*1. Years in actual usage environment in Omron's unique accelerated evaluation tests. Applicable oil type: specified in JIS K 2241:2000

Refer to the catalog for details.
