WS02-CFSC1-J/EV3 Network Configurator Ver. 3.34 Release Note

WS02-CFSF1-J/EV3 Network Configurator is upgraded to Ver. 3.34.

1. Upgrades from Ver.3.33 to Ver.3.34

Network Configurator is upgraded from Ver. 3.33 to Ver. 3.34 as shown below.

Refer to the manual of the software for the upgrades in Ver. 3.33 or lower.
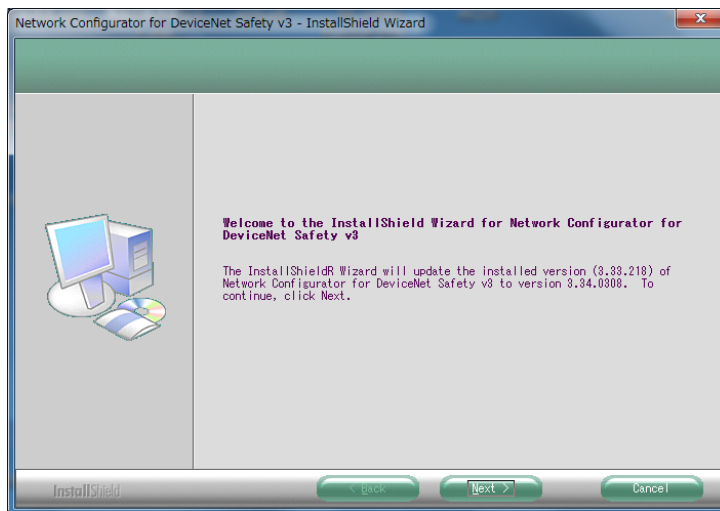

1.1. Improves maintenance tool stability

The error, which interrupted downloading (i.e. restoring data) and showed the message of "LogicEditor: Consistency Error", has been fixed.
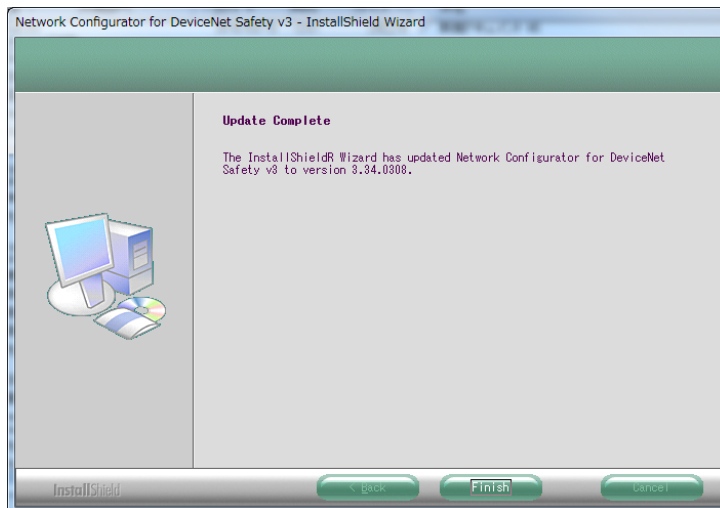

2. Updating Procedure

Use the following procedure to update the Network Configurator to Ver. 3.34.
To update the Network Configurator to Ver. 3.3* must have been installed.
Updating from Ver. 1* and Ver. 2* is not supported.

2.1. Updating

1. Execute the update module
   (NetworkConfigurator_for_DeviceNet_Safety_v3.34.0308_Update_Us.exe).
   The following wizard will be displayed.

2. Follow the instructions displayed on the wizard to update the version.
3. When the following screen is displayed, updating is completed.

2.2. Confirmation of Installation

- **Windows XP**

  Select ***Control Panel*** - ***Add or Remove Programs*** from the Windows Start Menu.
  Next, select the *Network Configurator for DeviceNet Safety v3* from the installed program list,
  and then refer to the support information.

  If *3.34.0308* is displayed for the version in the Support Info Dialog Box, the software has been
  updated correctly.

- **Windows Vista**

  Select ***Control Panel*** - ***Programs*** - ***Program and Features*** from the Windows Start Menu.
  Next, select *Network Configurator for DeviceNet Safety v3* from the list of installed programs.
  If the Details Pane is not displayed on the Program and Features Window, select ***Organize*** -
  Layout - ***Details Pane*** in this order.
  If *V3.34.0308* is displayed for the product version in the Details Pane, the software has been
  updated correctly.

- **Windows 7**

  Select ***Control Panel*** - ***Programs*** - ***Program and Features*** from the Windows Start Menu.
  Next, select *Network Configurator for DeviceNet Safety v3* from the list of installed programs.
  Like Windows Vista, if *V3.34.0308* is displayed for the product version in the Details Pane, the
  software has been updated correctly.
