WS02-CFSC1-JV3/EV3 Network Configurator Ver.3.42 Release Note

WS02-CFSC1-JV3/EV3 Network Configurator is upgraded to Ver.3.42.

1. Upgrades from Ver.3.41 to Ver.3.42

Network Configurator is upgraded from Ver.3.41 to Ver.3.42 as shown below.
Refer to the manual of the software for the upgrades in Ver.3.41 or lower.

1.1. Improves logic editor stability

Solved the problem that the Network Configurator might terminate abnormally when executing device verification or displaying report for a program in which the output tag and jump address are connected to "Fault Present" of the function block.

1.2. Supports the Third-party EDS files (Edition 3.11 or later)

Solved the problem that Network Configurator became inoperable when a third-party EDS file (Edition 3.11 or later) is installed and a device is placed on the virtual network.

1.3. Other improvements

Optimized the DLL loading process at application startup.
