## Conveyor Positioning Control
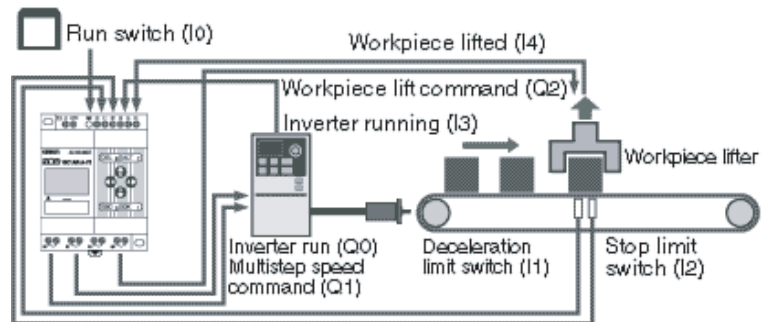

● Bit Logic Applications
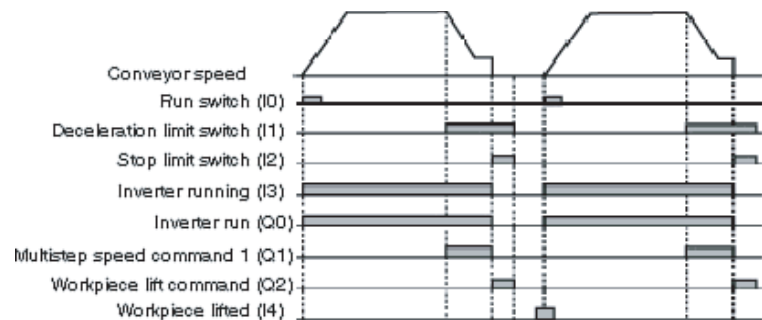

The inverter positions products of a specified distance.

■ System Configuration

When connecting a 3G3JV or 3G3MV Inverter
・ Wire inverter run (Q0) to input terminal S1 on the Inverter.
・ Wire multistep speed command 1 (Q2) to input terminal S5 on the Inverter.
・ Wire Inverter running (I3) to output terminal MA on the Inverter.

■ Program Example
